Software engineer who specialized in frontend side, but also has some ability to code on backend side. Very passionate about modern web and mobile technology using JavaScript while taking into consideration the latest trends and techniques. I wrote the code structure cleanly and optimally. And I would be a fast learner to doing new things and build good teamwork either. I've experience in developing projects using the ExpressJS for the backend and ReactJS for the frontend, and using MySQL for the database. Mastering the cloud on AWS, able to work together using GitHub, GitLab and Bitbucket.
